Our paver labyrinths are installed by Marty Kermeen, the world's leading paver labyrinth artist. Together we developed a method of having the most difficult and time-consuming cutting done by water jet. That reduces the time on the job from a month to ten days, and the cost from \$100,000 to closer to \$50,000.

Left: The center of a Chartres labyrinth, cut and laid out at the water jet facility. Using this technique we can have the center be a grid, which is much more pleasing to the eye than ever-narrowing concentric circles.

Left: The same center, now installed in the labyrinth.

Right: See how the center lines up with the entrance paths, rather than "blocking" the entrance with incongruous circles.

The key to the value of our installations lies in the quality. Poor bases and sloppy construction may look good for a

few years, but then it will fall apart. Our labyrinths are made to last many decades. Our pre-cut paver labyrinths can be scaled to any size, generally ranging from 36 feet to 47 feet in diameter. Typically, the cost range is \$45,000 to \$65,000.
